HOW to measure your horse with the GFS XCH measuring device

STEP 1
To get an accurate measurement place your saddle on your horse in the usual position. Make a note of where the front of the saddle contacts the horse. This should be approximately three fingers width back from the shoulder blade.

STEP 2
Remove the saddle and place the measuring device in the correct position.

STEP 3
Move the measuring device until both sides are contacting the horse and a measurement can be taken.

STEP 4
Once you have moved the measuring device to the correct setting a reading can be taken.

STEP 5
Remove the measuring device from the horse without losing the reading.

STEP 6
Your horse's size is clearly indicated on the measuring device.

These steps can be repeated every few months to monitor your horses shape and saddle fit.

Note: If you have fitted the correct size gullet and your saddle is still not fitting correctly, the panel may require re-flocking. For advice please contact GFS on 01922 638094.

Your horse will change shape for many different reasons, just like us. It is often due to age and maturity, the type of work your horse is doing and it's levels of fitness.
